**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-6, drawn to a method for enhancing immune responses by upregulating co-stimulatory molecules, classified in classes 514 and 535, subclasses 54 and 123.1+, respectively.
  - II. Claims 7-17, drawn to a method for expressing an increased number of B7 molecules on the surface of an antigen presenting cell to more efficiently potentiate the immune system, classified in class 424, subclass 184.1+.
  - III. Claims 18-21, drawn to an enhanced macrophage, classified in class 435, subclass 41+.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they have different modes of operation, different functions, or different effects. In the instant case the different inventions are directed to two separate and distinct methods one for enhancing immune responses by upregulating co-stimulatory molecules and the other directed to a method for expressing an increased number of B7 molecules on the surface of an antigen presenting cell to more efficiently potentiate the immune system.
3. Inventions (I and II) and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1)

Art Unit: 1614

the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process of using that product such as with a method for determining and/or assaying the presence of the a macrophage.

4. Because these inventions are distinct for the reasons given above and the search required for Groups I is not required for Groups II and III, restriction for examination purposes as indicated is proper.

5. Claim 1 is generic to a plurality of disclosed patentably distinct species comprising various types of enhanced expression of co-stimulatory molecules. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

6. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

7. A telephone call to the attorney is not required where the restriction requirement is complex, see MPEP Section 812.01.

Art Unit: 1614

8. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
